COMPUTER **RECCOMENDATIONS** FOR GPUNCHER.

1. A minimum **dual core** CPU with a minimum of 3,0 Ghz
2. 64 bit architecture with any windows, 7, 8 or 10, 32 bit is OK too.
3. 16 Gb of Ram memory
4. 1 Gb real graphics card with a fast speed clock of 1000Ghz or more, our prefered is 2Ghz- DO NOT CONFUSE WITH AN INTEGRATED GRAPHICS CARD, INTEGRATED IS NOT A REAL GRAPHICS CARD, integrated graphics card might be OK but we recommend a real graphics card
5. You hard drive capacity depend of how much programming and storage you would do, now days 1 Tb is normal. The fastest the better, 7200 RPM reccommended.
6. 24" screen monitor, 27" is our prefered with a **minimum resolution of 1920x1080**

This is what we recommend but all depends on how heavily you would use your computer with how many applications open at the same time.
